Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is vague and indefinite what structure is intended in claim 1 line 5 "... by shifting the apparatus(10) ...". In the absence of better defining the intended structure the performs the "shifting", the Office has read this limitation as the apparatus can be shifted and the holding element(54) can independently move .

Claim 7 is vague and indefinite what structures are intended by drawer and rod because claim 1 does not define these structures or their positions.

Claim 10 is vague and indefinite what is intended by "counterelement of the drawer".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Omunki et al. (USP 5,508,517) or Gronek et al. (USP 4,585,351).

Omunki et al. teach an apparatus for positioning a sample. A sample(1) is placed on holder(9) which has been read on the claimed "receptacle(12)". The holder(9) is positioned on X-Y stage(11) which has been read on the claimed "stage (2)". Shield(14) is taught to shield the sample and has been read on the claimed "shielding panel (42)". Stage(10) further positions the sample and has been read on the claimed "holding apparatus(54)".

Gronek et al. teach a microscope stage having a plurality of carriers(12) that have been read on the claimed "receptacles(12)". The carrier(12) is positioned on X-Y stage(43) which has been read on the claimed "stage (2)". The stage(43) has templates(42) that include depressions(44) that have been read on the claimed "depressions(62)". Shield(48) is taught to shield the sample and has been read on the claimed "shielding panel (42)". Platform(47) further positions the sample and has been read on the claimed "holding apparatus(54)" and the platform is positioned by post(52) that have been read on the claimed rod(25).

Conclusion

The prior art made of record by Applicant in the 11/15/01 IDS has been considered. The Office notes this reference does not qualify a prior art because it has a later filing date.
